

Lazy Lizard

CODE: LLFILTER

\$57 inc GST

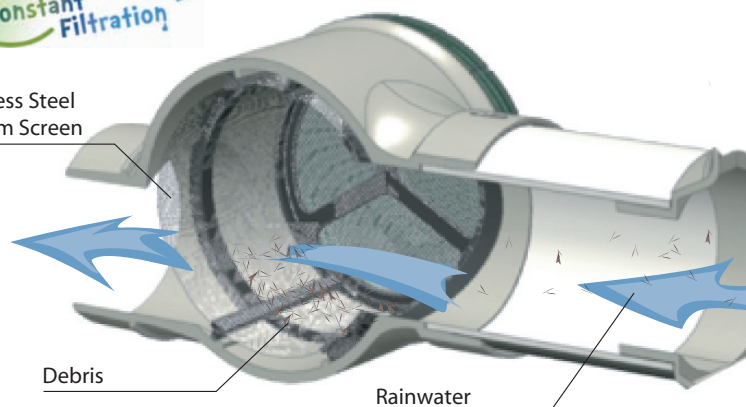

Lazy Lizard is a final stage filter that works with the Frogmouth filter or other rain head type filters with a 0.9mm mesh. It features a 240 micron stainless steel mesh filter that removes materials such as pollen, sand and silt, ensuring cleaner water is delivered to washing machines and toilets, and helps prevent sediment build-up in hot water.

Lazy Lizard Features

- Ideal for second stage filtration
- Ideal for removing fine silt which can damage washing machines when using rainwater from tanks.
- Strong PVC plastic construction.

Stainless Steel
250mm Screen

Lazy Lizard Benefits

- High flow rate through stainless steel mesh
- 240 micron stainless steel mesh filters most pollens and fine material.
- Inspection and cleaning is easy.

Lazy Lizard Overview

- Lazy Lizard should be fitted after a first stage filter
- The rainwater passes through the lazy lizard's 240 micron marine grade stainless steel filter where additional pollutants such as pollen, sand and silt are removed.
- Transparent cover for checking filter cleanliness
- The filter cartridge can be removed for easy cleaning or replacement.
- Lazy Lizard can be reversed for left or right side installation
- Lazy Lizard can be mounted vertically or horizontally.

Basic Specifications

- Stainless steel mesh - 240 micron
- Pipe connections - 90mm round
- Completely sealed unit
- Filters out fine materials
- Pull out filter basket
- Gives protection to pump & controller
- For use with modern domestic appliances
- When used in combination with the frogmouth filter, it becomes a continuous total filtration device.

Warranty Policy

- 12 month warranty

Frogmouth Dimensions

- Length 210mm
- Width 130mm
- Height 140mm

Frequently Asked Questions

Q: How often should I clean my filter?

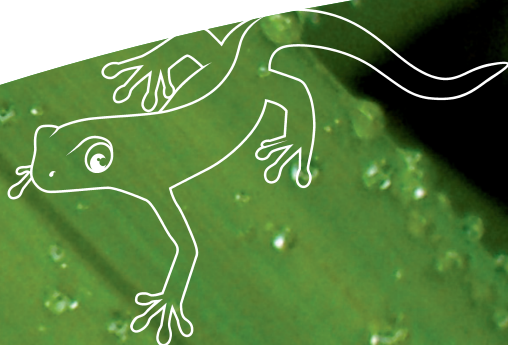

A: The filter is easily inspected via the transparent cover. If a build up of material can be seen, the filter should be cleaned.

Q: How do I clean my filter?

A: Simply unscrew the transparent cover by hand and pull the strainer out using the metal handle. The mesh basket strainer can now be washed and replaced.

Q: The mesh seems to be jammed in its housing

A: Be sure the mesh is inserted the correct way paying attention to the locating lugs on the inner housing of the filter
