

**Liquidity VLS**

# Custom Lining & Enclosed Bladder Solutions

**Liquidity VLS™ is another innovative water storage solution developed by Waterplex for domestic, commercial and industrial applications.**

Liquidity VLS™ solutions are designed to allow the utilisation of previously wasted space by

- Lining voids that can then be used to store water or other liquids
- Creating custom made enclosed water storage solutions that encapsulate the water preventing direct contact with any part of the building structure and eliminating the risk of condensation on sub-floor surfaces

Liquidity VLS™ - the superior containment solution

- The thickness of the lining is guaranteed to be exactly the same over the entire solution
- Superior fabrics are matched with the liquid being stored and the required application to ensure the strength and integrity of the lining and the quality of the liquid
- Almost any void shape can be lined - including protrusions
- The liners are designed and installed to allow movement in case of any structural movement or foreign object intrusion
- The only capacity limitation is the available space of the void area within a structure

**Liquidity VLS**

**Liquidity VLS™ 'You design it - we'll line it'**

**Waterplex**

# Liquidity VLS™ 'You design it - we'll line it'

## Liquidity VLS™ is also perfect for Retro Fit Applications

The lining of tanks or voids after they have been installed is possible due to the ability of liners to be packed at a fraction of the finished capacity. Where liners cannot be fully fabricated off site then Waterplex offers an on-site fabrication service.

Examples of retro fit applications include:

- Re-lining voids that are leaking due to failed paint-on applications
- Lining voids after the building process is complete to ensure integrity of the void and the quality of the liquid
- Lining leaking metal, concrete or plastic storage tanks
- Utilising previously wasted void spaces in building structures that can be used to store liquids
